

Betting on Librarians:

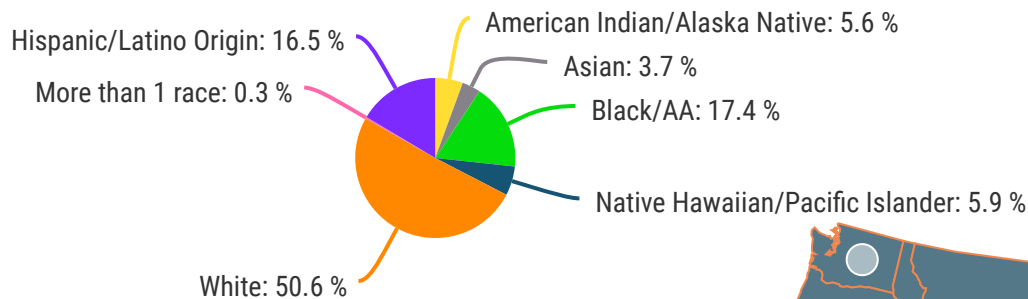

Potential Supporters of Prevention Research

B Lab findings from an **online survey** examining the willingness and past training of U.S. library staff to lead **adolescent-focused public health interventions**

WHO

Total 269 participants

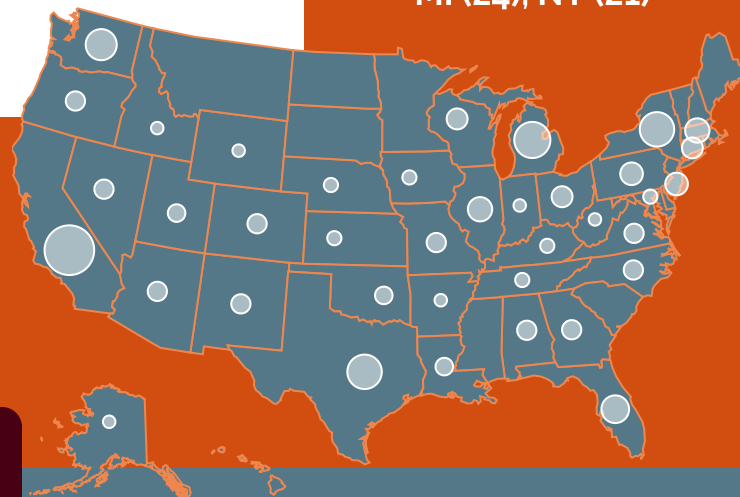

56% identified as female

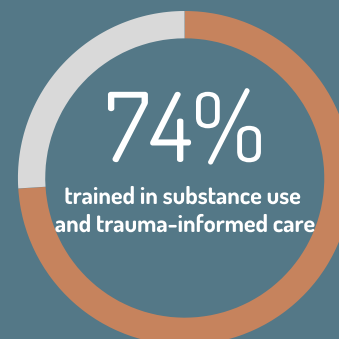

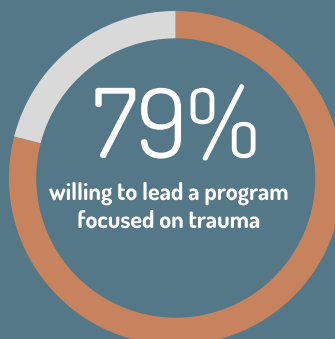

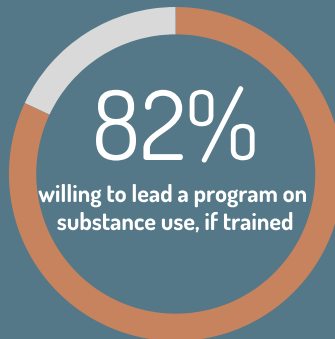

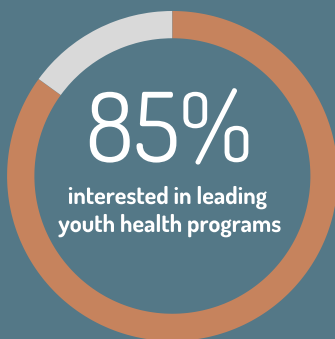

WHERE

Responses from 37 states

Highest: CA (53), MI (24), NY (21)

WHAT WE LEARNED

TAKEAWAY: Librarians are interested in and comfortable enough to deliver prevention interventions to youth

NEXT STEPS: Partner with librarians to develop trainings around public health topics and assist librarians in leading public health interventions for youth
